

1. What type of TV screen technologies are currently available in Australia, and which are the most frequent?

- **Column Used:** Screen_Tech (String), Model_No:(String)
- **Chart Type:** Bar Chart
- **Reasoning:** optimal choice for comparing the frequency distribution of categorical data, allowing for quick identification of the most dominant technology.

2. What screen sizes are currently available, and which are the most frequent?

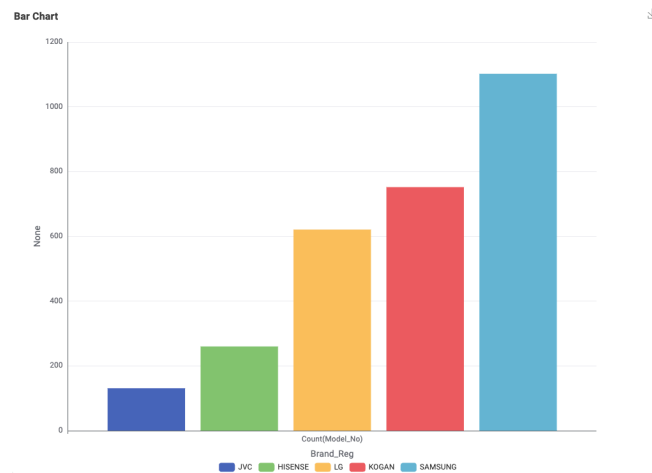

- **Column Used:** Screen_size_inch2(String), Model_No(String)
- **Chart Type:** Bar Chart
- **Reasoning:** Screen sizes were categorized into standard marketing labels (e.g., "55", "65"). A Bar Chart visualizes the count of models per size category to identify market trends.

3. Which brands have the greatest number of different models?

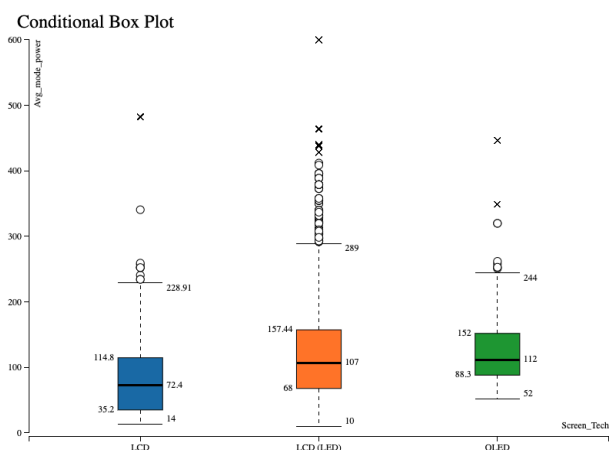

- **Column Used:** Brang_Reg(String), Model_No(String)

- **Chart Type:** Bar Chart
- **Reasoning:** Displays the count of unique models per brand. This highlights market dominance by volume of products available.

4. Which type of screen technology consumes the least amount of power?

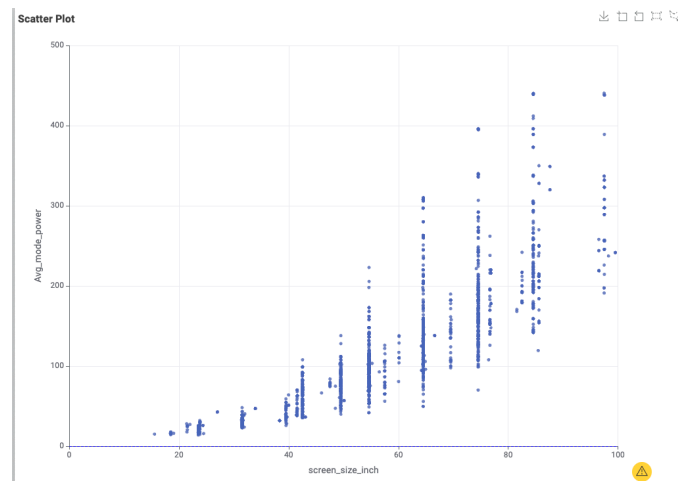

- **Column Used:** Screen_Tech(String), Avg_mode_power(Number)
- **Chart Type:** Box Plot
- **Reasoning:** A Box Plot is selected over a bar chart to show the *distribution* of power consumption. It reveals the median power usage and outliers for each technology, providing a more accurate comparison than simple averages.

5. What is the relationship between screen size and power use?

- **Column Used:** screen_size_inch (number), Avg_mode_power(Number)
- **Chart Type:** Scatter Plot

- **Reasoning:** A Scatter Plot is required to visualize the correlation between two continuous numeric variables. It effectively shows the trend: as screen size increases (X-axis), power consumption generally increases (Y-axis).

6. What is the relationship between star rating and screen size?

- Column Used: Star_Rating_Index (number), screen_size_inch2(string)
- **Chart Type:** Scatter Plot
- **Reasoning:** Used to see the trend and analyze if larger screens correlate with higher or lower energy efficiency ratings.
